Subject: re: TUCSON ELECTRIC POWER COMPANY partial waiver of the Commission's Net Metering E-01933A-15-0100

Dear Tom Forese,

Tucson Electric Power has applied for a waiver of Net Metering rules A.A.C. R14-2-2307, Docket No. E-01933A-15-0100.

In order to better understand the impact to customers' billing it would be useful for TEP to submit several case scenarios showing impacts on monthly customer bills, both summer and winter, where power is generated both in excess of consumption and short of consumption under the current net metering rate structure and the proposed rate structure.

Also helpful would be describing the details of how any excess generation would be credited.

For already installed PV systems that are grandfathered, those systems represented a substantial investment on the part of PV system purchasers. Those systems are long term investments that were also considered accretive to home value based on system life (20+ years) and what value they added to properties, even if properties were subsequently sold. I am hopeful that the grandfathering follows the PV system, not just the TEP customer, meaning a property sold would continue to benefit from the grandfathered net metering arrangement.

I appreciate your thorough consideration of this matter.

Sincerely,
Roy Schwartz
